1. Foreword

Article 6, para. 6.1 of the Rules Governing the Forward Account Registration Platform (hereafter "PCE Rules") provides that access to the PCE information system shall take place through the Internet or by any other means as defined in the Technical Rules.

Article 11, para. 11.1 of the PCE Rules provides that Participants shall have access to the PCE via special procedures (defined in the Technical Rules), which shall guarantee their identification and authenticate their registrations.

2. Access to the PCE information system

Access to the PCE information system will take place via a process of personal identification of Users-Participants based on a personal digital identification certificate[1].

The personal digital identification certificate must be issued by a trust service provider listed in the public register (maintained and made available by *Agenzia per l'Italia Digitale*) and be compatible with the PCE platform.

For this purpose, in the PCE participation application (Annex 1 to the PCE Rules), the applicant must specify the name/s and operational role/s (user/s, viewer/s) of the party/parties authorised to access the PCE information system on its behalf.

After admission of the applicant, each user or viewer specified in the participation application may request registration of its personal digital authentication certificate on the PCE platform.

[1] To allow PCE participants/users to obtain their certificates and adapt their systems, access to the PCE may, on a provisional basis, take place via user IDs and passwords for an additional 150 days following the publication of this Technical Rule.
